F. Pop

Outline

Past, Present and
Future

Walkthrough

Key components

udebs

Discussion

- ▶ d-i is nearly release quality (rc1 underway)
- ▶ Porting to most architectures almost done
- ▶ Bug squashing and fine tuning for release
- ▶ No big changes anymore before releasing Sarge

The future (now)

d-i internals

F. Pop

Outline

Past, Present and
Future

Walkthrough

Key components

udebs

Discussion

- ▶ Well done graphical front-end
- ▶ Custom installers made easy
- ▶ Automated or unattended installs
- ▶ Install without reboot?
- ▶ ...
- ▶ (The modular design makes additions easy)

Stage 0: booting

Goal: Get the installer running

d-i internals

F. Pop

Standard path:

1. Booting of the computer by the BIOS, OpenFirmware, ...
2. Loading of the boot-loader from CD-ROM
3. Loading of the kernel and initial ramdisk
4. Starting the kernel

Additional paths:

- ▶ Booting from another OS (loadlin, BootX)
- ▶ Network Boot (PXE, TFTP, ...)
- ▶ Loading of kernel and initial ramdisk from floppy
- ▶ Booting from USB memory stick

[!] Debian software selection

At the moment, only the core of Debian is installed. To tune the system to your needs, you can choose to install one or more of the following predefined collections of software.

Choose software to install:

- Desktop environment
- Web server
- Print server
- DNS server
- File server
- Mail server
- SQL database
- Laptop
- Standard system

<Continue>

<Tab> moves between items; <Space> selects; <Enter> activates buttons

Stage 2: after loading additional components

Goal: Install the base-system and make it bootable

1. Partition disks and assign mount points
2. Set up clock (UTC/local), timezone, root password, user
3. Install base system (from cdrom, network or iso-image)
4. Install a few additional packages and kernel
5. Configure apt for target system and install tasks
6. Install boot loader
7. Reboot into installed system

Stage 2: after loading additional components

Goal: Install the base-system and make it bootable

1. Partition disks and assign mount points
2. Set up clock (UTC/local), timezone, root password, user
3. Install base system (from cdrom, network or iso-image)
4. Install a few additional packages and kernel
5. Configure apt for target system and install tasks
6. Install boot loader
7. Reboot into installed system

Stage 2: after loading additional components

Goal: Install the base-system and make it bootable

1. Partition disks and assign mount points
2. Set up clock (UTC/local), timezone, root password, user
3. Install base system (from cdrom, network or iso-image)
4. Install a few additional packages and kernel
5. Configure apt for target system and install tasks
6. Install boot loader
7. Reboot into installed system

Stage 2: after loading additional components

Goal: Install the base-system and make it bootable

1. Partition disks and assign mount points
2. Set up clock (UTC/local), timezone, root password, user
3. Install base system (from cdrom, network or iso-image)
4. Install a few additional packages and kernel
5. Configure apt for target system and install tasks
6. Install boot loader
7. Reboot into installed system

7. Reboot into installed system

Summary: advantages and features of d-i

Advantages

- ▶ Easy default installs
 - ▶ "Wizard style" guided installation
 - ▶ Reasonable default options
 - ▶ Minimum of questions asked
- ▶ Possibility of expert installs for fine tuning
- ▶ Modular design makes additions easy

Normal Linux system, but

- ▶ Very specific purpose
- ▶ Mainly running only one program
- ▶ Root filesystem in a RAM disk
- ▶ Configured to run on almost any hardware

udebs

Discussion

Minimal Debian packages: udebs

- ▶ Normal Debian packages (technically)
- ▶ Not policy compliant
 - ▶ No documentation and copyright files
 - ▶ File ending .udeb
 - ▶ Reduced to minimal size

Types of udebs

- ▶ Perform an installation step
 - ▶ Provide a menu item (Choose language, Install the base system, ...)
 - ▶ Postinst script to perform actions
- ▶ Contain support files
 - ▶ Kernel modules
 - ▶ Programs (discover, busybox, ...)
 - ▶ Libraries (full libc, libparted, ...)

Companion: `udpkg` - a stripped down `dpkg`

Debconf

- ▶ All user input uses debconf
- ▶ Reimplementation of debconf in C
- ▶ Separation of protocol, storage back-end and front-end
 - ▶ Preseeding the debconf database for automated installs
 - ▶ Different front-ends for different purposes
- ▶ Standard debconf tools can be used for i18n
- ▶ New developments
 - ▶ Plug-ins
 - ▶ Pass through

Outline

Past, Present and Future

Walkthrough

Key components

udebs

Discussion

Priority

- ▶ Each question has its priority (low, medium, high or critical)
- ▶ D-I runs at a given priority (normally at high)
- ▶ Questions below the current priority are not shown (default answer)
- ▶ The priority is dynamically lowered on error (and raised on subsequent success)
- ▶ Priority critical mainly used in combination with preseeding

Outline

Past, Present and Future

Walkthrough

Key components

udebs

Discussion

Full main-menu after loading of additional components

- ▶ Central component controlling the installation process
- ▶ A debconf "select" question
- ▶ **Not shown in default installs**
- ▶ More than a menu
 - ▶ Dynamically adds items as new udebs are installed
 - ▶ Chooses next action based on menu item number, provides and dependencies
 - ▶ Calls udeb to run postinst scripts

Walkthrough

Key components

udebs

Discussion

Space is very limited

- ▶ No PERL, no Python, no ... (insert your favourite scripting language)
- ▶ d-i should fit on 2 floppies (kernel and initrd)
- ▶ d-i should be able to install with minimal RAM (currently approx. 32MB)

Programs either in C or shell (busybox)

- ▶ Shell preferred: easier to debug (set -x) and maintain
- ▶ Shell preferred: "live changes" possible
- ▶ Only stripped down tools from busybox
- ▶ nano: editor (and pager)
- ▶ C where shell is not feasible (anna, kbd-chooser, ...)

Discussion

localechooser lists all available translations

- ▶ localechooser is the first screen shown on ordinary d-i installs
- ▶ Everything shown after this should continue localized
- ▶ Language choice affects defaults for country and keyboard selection
- ▶ Which languages are available depends on frontend
- ▶ Language and country together determine default locale (UTF-8)

Hardware detection

Packages: `udev`, `discover1`, `ddetect` (`ethdetect`, `hw-detect`, `hw-detect-full`)

Hardware detection

- ▶ For 2.4 based installs: `discover`
- ▶ For 2.6 based installs: `udev`

anna and retrievers

Packages: `anna`, `{net,cdrom,floppy}-retriever`

d-i internals

F. Pop

system to download/install additional components

- ▶ installs all udebs with priority standard or higher
- ▶ resolves dependencies
- ▶ changes to the list of selected udebs are possible at debconf priority smaller than medium

udebs are downloaded/installed by retrievers

- ▶ `net-retriever` to download from a Debian mirror
- ▶ `cdrom-retriever` to install from a mounted CD-ROM (or loop mounted iso-image)
- ▶ `floppy-retriever` to install some udebs from floppy and rerun `anna` afterwards

```

Partman's main screen

partman - partitioning and mount points

Packages: partman-*, mdcfg, lvmcfg

d-i internals

F. Pop

Features

- ▶ Multiple filesystem support:
 - ▶ ext2/3
 - ▶ reiserfs
 - ▶ jfs
 - ▶ xfs
- ▶ Based on libparted
- ▶ Support for LVM and software RAID
- ▶ Automatic and manual partitioning
- ▶ New: automatic partitioning using LVM

partman - partitioning and mount points

Packages: `partman-*`, `mdcfg`, `lvmcfg`

d-i internals

F. Pop

Split into several small udebs:

- ▶ One for each supported filesystem
- ▶ Simple to add support for new filesystems
- ▶ Additional udebs for architecture support
- ▶ Any addition can be implemented in its own udeb

"Client/Server" architecture

- ▶ Server written in C performs actions using `libparted`
- ▶ Clients written in Shell send commands over FIFOs

Partman would be a topic for a talk on its own.
